Art Unit: 1714

Claims 1-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 1-19 recite a process in which a polymer, a capping agent, a catalyst and a reactive diluent are contacted in a reactor under reaction conditions. The specification however, is enabling only for a process wherein the reactive diluent is contacted with the other ingredients in a mixer.

Claims 20-41 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

These claims recite a sealant composition comprising a reactive diluent. The process claims, however, recite a process in which the reactive diluent is contacted with other ingredients under reaction conditions. It is not understood how the reactive diluent would be still present as a diluent after reaction.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 6-14, 16, 20, 25, 27-30 and 32-39 are rejected under 35 U.S.C. 102(b) as being anticipated by Kozakiewicz et al.

Kozakiewicz et al disclose compositions suitable for sealants comprising copolymers of acrylic and silane monomers. These copolymers are taught as produced by reacting the monomer charge in the presence of catalysts and chain transfer agents, the latter being seen as equivalent to applicants' capping agent. Component e of claim 1 of the reference is seen as functioning as a reactive diluent. The polymers are taught as having MW's and % solids within the ranges specified in the rejected claims. Applicants' limitations to viscosity and CF, while not explicitly recited, are seen as inherent to the compositions of the reference due to the chemical limitations being met.

Therefore the reference anticipates the rejected claims.
